

# Custom fabrication — one-off builds, brand experience pieces.

---

Stadium-scale logo walls, sculptural installs, brand experience pieces — we coordinate metal shops, CNC routing, waterjet, paint, and assembly so the finished piece arrives ready to install instead of staged across five vendors.

## Specification notes

### What it covers

Anything that does not roll off a standard shop's product line: oversize dimensional letters, sculptural brand pieces, mixed-media logo walls, integrated lighting, monument signs in non-standard substrates, and stadium-scale graphics. We bid the design intent and own the cross-vendor coordination so you do not.

---

### Design and fabrication drawings

We can take a brand-team concept sketch and develop fabrication drawings through our drafting partners, or work from your environmental graphic designer's set. Either way, drawings release as engineered fab packs — not just renders — so the shop building the piece is not interpreting intent.

---

### Timeline

Design intent to drawing freeze: 2-4 weeks. Fabrication: 4-8 weeks by size, finishing, and integrated lighting. Install: 1-3 days on site. Budget and schedule lock at the fab-freeze milestone, not at concept — which is where loosely run custom budgets slip.

---

### One spec, fabricated and installed in every U.S. market.
